Best Use of Sentry

(1st Place: Every Member of the winning team gets a guaranteed interview with the Sentry team for our internship or new grad roles. Skip the resume pile entirely)

Most teams stop at catching errors. We want to see you go further. Build with Sentry and use at least two products beyond error monitoring: Session Replay, Logs, Tracing, Profiling, Uptime Monitoring, or our MCP/AI agent monitoring, to debug, understand, and improve your hack. Show us how observability actually shaped what you built: the slow endpoint you found in a trace, the broken flow you caught in a replay, the bug you squashed at 4am because your logs told you where to look.
