Even Realities Smart Glasses Building Challenge

1st Place: Even Realities G2 glasses for every team member (4 pairs, $2,400 total value)
2nd Place: $250 OpenAI/ChatGPT gift card for every team member ($1,000 total)
3rd Place: $100 OpenAI/ChatGPT gift card for every team member ($400 total)

Starter Pack

Technology should feel natural. Intelligence should be quiet. Attention should be respected.

That's the idea behind Even G2 and Quiet Tech: technology that is always ready, but never fighting to become the center of attention.

Your challenge is to build an Even Hub app that carries that philosophy forward.

Start with a moment in real life. Maybe someone is learning, moving, creating, performing, working, or talking with another person. Ask what information would genuinely help them in that moment, and how little technology it takes to deliver it.

Then build it for G2.

Your app can use an LLM, speech model, agent, or a model you trained yourself. What matters is how naturally that intelligence fits into the experience: information appearing when it matters, staying out of the way when it doesn't, and helping the wearer remain connected to what is happening around them.

What to submit

- Package and upload your app to Even Hub as a Beta build
- Run it on a physical G2 during judging; loaner devices will be available at the Even Realities table
- Submit your project to Devpost and select the Even Realities challenge
- Include your Even Hub app name in the submission
- Show the G2 experience in your demo video; through-the-lens footage or the simulator is fine
- Include README instructions for installing and running the app on G2, including any accounts or API keys a tester needs

App names must be 20 characters or fewer and cannot contain "Even." Even Hub does not allow medical, financial, or emergency-routing apps.

What we're looking for

Made for G2: Does the experience make thoughtful use of G2 and its place in the wearer's line of sight?

Quiet by Design: Does the technology appear when it is useful and stay out of the way when it isn't?

Originality: Does the idea open up a new moment or use case for Even Hub?

Experience & Polish: Is it clear, natural, and easy to use?

Execution: Can a judge put on G2 and experience the core idea right now?

Keep the scope focused. One thoughtful interaction that feels natural on G2 is more valuable than a long list of features.

Be ready to answer: Who is this for? What moment is it designed for? Why does it belong on G2?
