# LA Hacks Starter Pack

Veri is an AI infrastructure platform for training (fine-tuning and post-training) open models. I started this company a couple of months ago, so if something does not work it is probably broken. Please let me know if you find something broken lol.

## Our track

Use our platform to train an open-source model.

Some things you could do:

You can now train your own Decision model like Jev locally!

We increased Qwen3.5 0.8B's aggregate accuracy from 20.7% to 74.3% across 3 decision benchmarks - on just 4GB VRAM.

Turn any LLM like Qwen3.8, Gemma 4 i
with our open-source Unsloth repo.

# Train your own Decision Model

You can now train your own decision model like **Jev**, **Laya** and **Clef** with Unsloth. Fine-tune Qwen3.8 and Gemma 4 LLMs to convert them into decision models so they **make decisions** instead of generating text. The fine-tuned model reads your input, scores the options you provide and returns a choice with a probability. Training uses the same dataset format as Laya and Clef.

| Model | type-decision | BANKING77 | CLINC150 | Holdout acc |
|---|---|---|---|---|
| Qwen3.5-0.8B | 36% → **73%** | 7% → **74%** | 19% → **76%** | 78% |
| Qwen3.5-2B | 33% → **78%** | 1% → 58% | 1% → 62% | 81% |

We fine-tuned LLMs with a Clef head using LoRA (r=64) for just one epoch, boosting downstream accuracy from 30–37% (which is roughly chance level) to **high as 78%**. Test sets were **decontaminated** against the training data.

**Prompt** Qwen3.5-0.8B

unsloth

"Hi, I was charged twice for invoice #4411. Please refund the duplicate today."

**Before**

This looks like a billing issue since the customer was charged twice. They are asking for a refund of the duplicate charge. It seems fairly urgent because they want it resolved today, so I'd suggest routing it to the billing team with high priority.

**After fine-tuning**

Team — Probability
**Billing** Technical 5% · Sales 2% — 93%

Refund
**Yes** No 25% — 75%

Urgency
**Today** Soon 7% · Not urgent 1% — 92%

## What we do

We help companies continually improve their AI models as their product gets used.

## What you get

- GPU access through the `veri` CLI and API. Right now we have a lot of L4s, a small handful of H100s, and single H200s. If you hit a capacity error, someone else is probably holding onto them: nothing was billed, and the error names what to launch instead (see "Getting unstuck" in the skill below).
- Credits: DM **@daniung** in the LA Hacks Discord and redeem the code at veri.studio/settings/billing. Do this before your first run: jobs on a $0 balance are stopped as soon as they start billing.

## Getting started

Use this SKILL.md in any coding harness (Cl
`.claude/skills/veri/SKILL.md` (Claude C
(Cursor and others), or just paste it into your
box):
